Art Unit: 3611

1. Claims 65, 67, 68, and 72 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-31, 35-39, 43, and 45-53 of U.S. Patent No. 6,592,136. Although the conflicting claims are not identical, they are not patentably distinct from each other because every structural feature claimed is recited in the prior patent claims and the structure of the prior patent claims is capable of performing the claimed operation.

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.
- (e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

3. Claims 65, 67-74 are rejected under 35 U.S.C. 102(a and e) as being anticipated by Gonzalez et al. (USPN 6,120,049).

Gonzalez shows a bicycle front fork including a lock-out valve 134 including a manually movable knob 138 and a blowoff vlave 240 for blowoff passage 222. The

Art Unit: 3611

blow-off valve is biased by spring 242 and compression of spring 242 can be altered by changing the position of nut 242. The nut is external to the compression chamber 112, as broadly recited, and is capable of manipulation manually, without tools. Therefore, Gonzalez meets applicant's claims, as broadly recited.

- 4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 5. Claim 66 is rejected under 35 U.S.C. 103(a) as being unpatentable over Gonzalez et al. (USPN 6,120,049).

Gonzalez fails to specifically teach manipulating the blow-off valve threshold pressure without the use of tools. However, it is old and well known that a nut, such as the nut 210 of Gonzalez that controls the threshold pressure of the blow-off valve 240, may be manually manipulated. Therefore, it would have been obvious to one of ordinary skill in the art to manually adjust the nut, without the use of tools, in order to provide fine tuning of the blow-off valve.

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Tsai, Girvin (6026939 and 6382370), Becker, Turner, and Gonzalez teach manually adjustable bicycle suspensions.

7. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Anne Marie M. Boehler whose telephone number is 571-
